RESEARCH INTERESTS

My research interests lie in *multi-resolution analysis* of data for various topics in **Machine Learning, Computer Vision and Brain Imaging**. On the theoratical side, I am particularily interested in applied harmonic analysis in non-Euclidean spaces (e.g., signal processing on graphs) to develop novel methods for statistical analysis of images or image-derived measures. On the application side, I mainly focus on analysis of biomedical data to facilitate understandings of neurodegenerative brain disorders such as Alzheimer's disease (AD) towards mechanisms for diagnosis, discovering new treatments and design of new studies.
