1. Product Concept

Volunteer Tracking System is a web-based application. The main purpose of this system is to provide a system to the Volunteers in the College of Engineering Board of Advisors to input, track and analyze their volunteer activities. To keep track of different activities or upcoming opportunities, the system will send a notification to all the volunteers.

In addition to the website, an Android based mobile app will be developed. The purpose of this app is to provide an ease of access to the Volunteer Tracking System. The app will offer the same functionality as the website.

1.1 Purpose and Use

Volunteer Tracking System is designed primarily for the College of Engineering Board of Advisors. In the future, it may be open to students from different departments. The purpose is to provide a capability to track volunteer activities such as record the hours spent, the activity attended, upcoming activities and provide analysis. Currently, the Board is using a manual spreadsheet to record and calculate the number of hours spent volunteering. This system would provide an efficient way to track the activities.

1.2 Intended Audience

The intended audience for Maverick Volunteer Tracking System currently is the College of Engineering Board of Advisors. In the future, it may be open to students who wish to volunteer around and outside the campus.
2. Product Description and Functional Overview

This section provides the reader with an overview of the Maverick Volunteer Tracking System. The primary operational aspects of the product, from the perspective of end users, maintainers and administrators, are defined here. The key features and functions found in the product, as well as critical user interactions and user interfaces are described in detail.

2.1 Features and Functions

The application will be hosted on uta.edu under the College of Engineering page titled “Giving and Outreach.” No external resources or files are needed for the user to begin using the application. The site will contain a login/registration page used for validating or registering the user. When the user is validated, they will have access to the system. Below is a list of frontend components that make up the system:

- “Home” page (see Figure 2-1)
  - Buttons: "Opportunities", “Reports”, “Notifications”, “Member” (only available to facilitators and system administrators), “Profile”, “Opportunities of your Category” (only available to facilitators and system administrators), “Generate a Letter of Validation” (only available to facilitators and system administrators), “Logout” (visible when clicked on “Profile” button)
  - Banners – a slideshow of banners featuring promotional material
  - Upcoming Opportunities – when an opportunity is clicked, the user will be directed to a page where they can confirm their participation for the particular opportunity (see Figure 2-2)
  - Top 5 members for the current month in terms of hours volunteered
  - Newsfeed - member achievement updates
  - Footer – system administrator’s contact information, about the Maverick Volunteers, help, privacy policy, terms and conditions

- "Opportunities" page (see Figure 2-3) – This page will list all available opportunities that the user can volunteer for.
When an opportunity is clicked the user will be directed to that opportunity’s page (see Figure 2-4)

- “Member Profile” page (see Figure 2-5)
  - Tabs: “About”, “Volunteer Progress”, “Upcoming”
- “Reports” page (see Figure 2-6)
  - Tabs: “Generate Reports”, “View Reports”
- “Members” page (see Figure 2-7) - only available to facilitators and system administrators
- “Notifications” panel (see figure 2-8)
- “Opportunities of your Category” - only available to facilitators and system administrators
- “Generate a Letter of Validation” - only available to facilitators and system administrators

Although each of these components will be discussed in greater detail in Section 10 Use Cases, below is a brief overview of the main components.

When the user logs in, they will be redirected to the “Home” page where they can customize preferences such as times and days they are available, and interest in different categories. Based on their input, the system will reevaluate the upcoming opportunities and filter it according to the preferences set by the user.

In addition to the customization, the “Home” page will also provide different navigation buttons such as “Opportunities”, “Profile” and “Reports.” If the user selects “Profile,” they will be directed to another page containing a form, which will contain fields necessary to complete the tracking. When they submit the form, the facilitator will receive a notification. If the user selects “Opportunities,” they will be directed to another page that will contain a list of the upcoming volunteer opportunities. From this page, the users can also select an opportunity to view more details about it. On each opportunity they will have an option to select a check mark for that specific opportunity to indicate they are attending that opportunity. Upon this action, the facilitator will receive an email notification.

If the user selects the “Profile” button, they will be directed to another page, which will contain their total number of hours volunteered along with the breakdown of all the hours and what type of activity they were a part of. A facilitator has an additional option to generate reports. When the facilitator clicks the “Reports” button, they will be able to generate a monthly report listing details such as the number of volunteered, the total hours spent, any additional attachments or comments. An additional option will be available to the admin to view current members. When an admin clicks the “Members” button they will be able to see all of the members in the system and will have an option to “Promote” a member to a facilitator.
The Android application will have the same format as the website with respect to the various buttons and pages.

### 2.2 External Inputs and Outputs

3. Customer Requirements

This section will cover requirements that are important to our customer. The application’s main function is to provide the ability to track volunteer hours the College of Engineering Board of Advisors. In several requirements below, there are references to different types of users such as Admin, Facilitators, and Volunteers. Admin includes Administrators who manage the Maverick Volunteers such as Dr. Peterson. Events are divided by categories and each category will have a designated Facilitator assigned by the Admin. Volunteers are currently the members of the College of Engineering Board of Advisors.

3.1 Input Volunteer Hours

3.1.1 Description: The Volunteer Tracking System shall allow a user to input the hours volunteered.

3.1.2 Source: Maverick Volunteers

3.1.3 Constraints: User must be connected to the Internet to access the web-based system.

3.1.4 Standards: None

3.1.5 Priority: 1-Critical

3.2 Notify Admin

3.2.1 Description: The Volunteer Tracking System shall also notify the admin when members input their time volunteered for the opportunities.

3.2.2 Source: Maverick Volunteers

3.2.3 Constraints: User must be connected to the Internet to access the web-based system and have a valid email account to receive the notifications.

3.2.4 Standards: None

3.2.5 Priority: 2-High
3.3 Input Volunteer Hours on Behalf of User

3.3.1 Description: Upon the request of the volunteer, facilitators must be able to input the volunteer hours on behalf of the volunteer.

3.3.2 Source: Maverick Volunteers

3.3.3 Constraints: User must be connected to the Internet to access the web-based system.

3.3.4 Standards: None

3.3.5 Priority: 1-Critical

3.4 Add Volunteer Opportunities

3.4.1 Description: The Volunteer Tracking System shall allow facilitators to input the new or upcoming volunteer opportunities. An opportunity may include a title, description, date and time, location and images.

3.4.2 Source: Maverick Volunteers

3.4.3 Constraints: User must be connected to the Internet to access the web-based system

3.4.4 Standards: None

3.4.5 Priority: 2-High

3.5 Delete Volunteer Opportunities

3.5.1 Description: The Volunteer Tracking System shall allow facilitators to delete volunteer opportunities previously entered into the System.

3.5.2 Source: Maverick Volunteers

3.5.3 Constraints: User must be connected to the Internet to access the web-based system

3.5.4 Standards: None

3.5.5 Priority: 2-High
3.6 Sign Up for Volunteer Opportunities

3.6.1 Description: The Volunteers shall be able to see the details of an opportunity such as the date, time, and location and have an option to sign up for an opportunity to indicate they will be volunteering at that opportunity.

3.6.2 Source: Maverick Volunteers

3.6.3 Constraints: User must be connected to the Internet to access the web-based system

3.6.4 Standards: None

3.6.5 Priority: 2-High

3.7 Notify Volunteer

3.7.1 Description: The Volunteer Tracking System shall notify the volunteer upon their acceptance/commitment of an opportunity.

3.7.2 Source: Maverick Volunteers

3.7.3 Constraints: User must be connected to the Internet to access the web-based system and have a valid email account to receive the notifications.

3.7.4 Standards: None

3.7.5 Priority: 2-High

3.8 Track Progress

3.8.1 Description: The Volunteer Tracking System shall allow users to track progress of their volunteer activities and the status of different service levels. Service levels are different levels that volunteers can achieve based on the total number of hours. The levels are divided as follows: 30, 60, 90, 150, and 150+.

3.8.2 Source: Maverick Volunteers

3.8.3 Constraints: User must be connected to the Internet to access the web-based system.

3.8.4 Standards: None
3.8.5 Priority: 1-Critical

3.9 Generate Reports

3.9.1 Description: The Volunteer Tracking System shall generate progress reports for each volunteer upon their request. The progress report should include details such as the categories/types of opportunities volunteered in, and the total number of hours volunteered.

3.9.2 Source: Maverick Volunteers

3.9.3 Constraints: User must be connected to the Internet to access the web-based system.

3.9.4 Standards: None

3.9.5 Priority: 2-High

3.10 Manage Reports

3.10.1 Description: The Volunteer Tracking System shall allow admin to send progress reports along with comments and attachments to the specified users.

3.10.2 Source: Maverick Volunteers

3.10.3 Constraints: User must be connected to the Internet to access the web-based system.

3.10.4 Standards: None

3.10.5 Priority: 3-Moderate

3.11 Generate Validation Letter

3.11.1 Description: The Volunteer Tracking System shall allow Facilitator to generate a letter of validation. Upon the request of a Volunteer, Facilitators should have the option to generate this letter. This letter will be a generic letter that identifies and validates the Volunteer and the organization they are a part of. It will also show a total number of hours they have volunteered.

3.11.2 Source: Maverick Volunteers

3.11.3 Constraints: User must be connected to the Internet to access the web-based system.

3.11.4 Standards: None
3.12 Promote Members

3.12.1 Description: The Volunteer Tracking System shall allow admin to designate or promote a member to a facilitator.

3.12.2 Source: TimeKeepers

3.12.3 Constraints: User must be connected to the Internet to access the web-based system.

3.12.4 Standards: None

3.12.5 Priority: 3-Moderate

3.13 Demote Facilitators

3.13.1 Description: The Volunteer Tracking System shall allow admin to demote a facilitator to a member.

3.13.2 Source: TimeKeepers

3.13.3 Constraints: User must be connected to the Internet to access the web-based system

3.13.4 Standards: None

3.13.5 Priority: 3-Moderate

3.14 Customize Preferences

3.14.1 Description: The Volunteer Tracking System shall allow volunteers to customize their preferences. Preferences include setting the date of availability along with level of interest in different opportunity categories.

3.14.2 Source: TimeKeepers

3.14.3 Constraints: User must be connected to the Internet to access the web-based system

3.14.4 Standards: None

3.14.5 Priority: 2-High
3.15 Login

3.15.1 Description: The Volunteer Tracking System shall allow users to login with their Email and password. When a user logs in to the system for the first time, the system shall allow them to enter their Email for validation. When the Email is validated, the system shall ask the user to establish their password. When a user logs in to the system again, they will be required to enter their Email and Password for validation.

3.15.2 Source: Maverick Volunteers

3.15.3 Constraints: User must be connected to the Internet to access the web-based system and have a valid email account.

3.15.4 Standards: None

3.15.5 Priority: 2-High

3.16 Logout

3.16.1 Description: The Volunteer Tracking System shall allow volunteers to logout of the system. When the user is logged out, the system shall redirect to the login page.

3.16.2 Source: TimeKeepers

3.16.3 Constraints: User must be connected to the Internet to access the web-based system.

3.16.4 Standards: None

3.16.5 Priority: 2-High
3.17 Validate Members

3.17.1 Description: The Volunteer Tracking System shall validate the members every three years. The College of Engineering Board of Advisors change every three years. The President of the University and the Dean of Engineering can extend a member’s term after three years or add additional members. Every three years, the system shall make all members inactive. The administrator shall be able to only activate members if they will be serving as the Board of Advisors for another three years.

3.17.2 Source: Maverick Volunteers

3.17.3 Constraints: User must be connected to the Internet to access the web-based system and the admin must have access to the list of board members appointment for the three-year term.

3.17.4 Standards: None

3.17.5 Priority: 4-Low

3.18 Generate Newsletter

3.18.1 Description: The Volunteer Tracking System shall generate a newsletter upon the addition of new volunteer opportunities.

3.18.2 Source: TimeKeepers

3.18.3 Constraints: User must be connected to the Internet to access the web-based system and have a valid email account.

3.18.4 Standards: None

3.18.5 Priority: 5-Future
3.19 Volunteer Stories

3.19.1 Description: The Volunteer Tracking System shall provide a social aspect to the interface where the volunteers can input and share their stories.

3.19.2 Source: TimeKeepers

3.19.3 Constraints: Image attachments and text must be displayed in a readable format.

3.19.4 Standards: None

3.19.5 Priority: 5-Future

3.20 Ease of Use

3.20.1 Description: The Volunteer Tracking System shall provide a user-friendly interface.

3.20.2 Source: TimeKeepers

3.20.3 Constraints: The screen size along with any information must be displayed in a readable format.

3.20.4 Standards: None

3.20.5 Priority: 3-Moderate

3.21 Android Application

3.21.1 Description: The Volunteer Tracking System shall be available in the form of an Android Application. The Application will be available in the Google Play Store to download for free.

3.21.2 Source: TimeKeepers

3.21.3 Constraints: The Android device shall support Android version 4.1.2 or higher.

3.21.4 Standards: None

3.21.5 Priority: 4-Low
4. Packaging Requirements

This section will cover how the project will be packaged to the users. Product will be accessible via the web as well as through an Android app. A link to the website will be available via the UTA College of Engineering website under the section “Giving.” The Android app will be packaged as an Android Application Package (.apk) file and will be available to download via Google Play. Both the website and the Android app do not require additional hardware or software to be installed.

4.1 Website URL

4.1.1 Description: Website will be hosted under a subdirectory of http://www.uta.edu.

4.1.2 Source: Maverick Volunteers

4.1.3 Constraints: None

4.1.4 Standards: None

4.1.5 Priority: 1-Critical

4.2 Page URLs

4.2.1 Description: Website URLs will be human readable and search engine friendly.

4.2.2 Source: TimeKeepers

4.2.3 Constraints: None

4.2.4 Standards: Apache URL redirection standards, canonical URLs

4.2.5 Priority: 3-Moderate
4.3  **Google Play Publication**

4.2.1 **Description:** Android app will be released into Google Play as a free download.

4.2.2 **Source:** TimeKeepers

4.2.3 **Constraints:** App must meet Google Play publishing standards and Android Design Guidelines

4.2.4 **Standards:** Google Play publishing guidelines

4.2.5 **Priority:** 3-High
5. Performance Requirements

This section discusses the performance requirements for this project. The main concerns regarding the performance of the product are based on primarily the availability and the responsiveness. The product is expected to offer a continuous and smooth experience to the user.

5.1 Application Response Time

5.1.1 Description: Response time between user interaction and result should be less than 8 seconds in both the website and the Android app.

5.1.2 Source: TimeKeepers

5.1.3 Constraints: Internet connections and hardware capability of the devices.

5.1.4 Standards: None

5.1.5 Priority: 3-Moderate

5.2 Dynamic Page Update

5.2.1 Description: Only the necessary parts of the web page will be updated upon the user interaction instead reloading the page completely.

5.2.2 Source: TimeKeepers

5.2.3 Constraints: JavaScript may not be enabled by default on web browsers.

5.2.4 Standards: AJAX standards.

5.2.5 Priority: 3-Moderate
5.3 File Compression

5.3.1 Description: JavaScript and CSS files will be compressed to reduce the file size. Size of JPEG images should be less than 3 MB.

5.3.2 Source: TimeKeepers

5.3.3 Constraints: None

5.3.4 Standards: None

5.3.5 Priority: 4-Low

5.4 Image Formats

5.4.1 Description: Vector graphic images will be used where applicable.

5.4.2 Source: TimeKeepers

5.4.3 Constraints: All images cannot be represented in vectors.

5.4.4 Standards: SVG standards

5.4.5 Priority: 4-Low

5.5 Third-Party Code Libraries and Frameworks

5.5.1 Description: JavaScript and CSS libraries will be directly accessed from the CDN servers, thereby, improving the access time in distant locations.

5.5.2 Source: TimeKeepers

5.5.3 Constraints: Not all the 3rd party libraries offer CDN URLs.

5.5.4 Standards: None

5.5.5 Priority: 4-Low
5.6 Custom Type Faces

5.6.1 Description: Website will be using web fonts instead encoding text in images or attaching custom font type faces.

5.6.2 Source: TimeKeepers

5.6.3 Constraints: Not all font types have a web version of it.

5.6.4 Standards: None

5.6.5 Priority: 3-Moderate

5.7 Serve Scaled Images

5.7.1 Description: Differently scaled images will be used in different scenarios. i.e. thumbnails, full-screen images

5.7.2 Source: TimeKeepers

5.7.3 Constraints: None

5.7.4 Standards: None

5.7.5 Priority: 4-Low
6. Safety Requirements

This section discusses the requirements needed for the user to safely use the product. Unauthorized access to the product will be prohibited and the product is optimized to minimize the user errors. Safety Requirements in the context of this product include the security and privacy of Information.

6.1 User Sessions

6.1.1 Description: User sessions will be expired after 24 hours of inactivity.

6.1.2 Source: TimeKeepers

6.1.3 Constraints: None

6.1.4 Standards: None

6.1.5 Priority: 3-Moderate

6.2 Website Cache

6.2.1 Description: Age of the website cache will be restricted to 7 days.

6.2.2 Source: TimeKeepers

6.2.3 Constraints: None

6.2.4 Standards: HTTP cache control standards

6.2.5 Priority: 3-Moderate
6.3 Image Metadata

6.3.1 Description: Image metadata such as geo information will be removed.

6.3.2 Source: TimeKeepers

6.3.3 Constraints: None

6.3.4 Standards: None

6.3.5 Priority: 4-Low
7. Maintenance and Support Requirements

This section covers the maintenance and support requirements of Volunteer Tracking System. It explains how the product will be maintained and what sorts of support will be provided in future.

7.1 Source Code Documentation

7.1.1 Description: The source code shall be well documented with comments and details about functionality. The code shall help anyone who want to further develop this product in future.

7.1.2 Source: TimeKeepers

7.1.3 Constraints: None

7.1.4 Standards: None

7.1.5 Priority: 2-High

7.2 System Maintenance

7.2.1 Description: The team TimeKeepers shall not be responsible to maintain the system or source code after completion of project. The College of Engineering website Developer, Christopher Woods, will continue to maintain the website as it will be hosted under uta.edu/engineering.

7.2.2 Source: TimeKeepers

7.2.3 Constraints: None

7.2.4 Standards: None

7.2.5 Priority: 2-High
7.3 Testing

7.3.1 Description: The features and functionality of Volunteer Tracking System will be thoroughly tested with all requirements before handing system to the customers.

7.3.2 Source: TimeKeepers

7.3.3 Constraints: None

7.3.4 Standards: None

7.3.5 Priority: 1-Critical

7.4 Android Version Support

7.4.1 Description: The mobile version of the system will be Android based. The application will support a minimum API level of 16, which corresponds to version 4.1.2 (Jelly Bean).

7.4.2 Source: TimeKeepers

7.4.3 Constraints: The Android device shall support Android version 4.1.2 or higher.

7.4.4 Standards: None

7.4.5 Priority: 2-High

7.5 Documentation/Source Code Availability

7.5.1 Description: All the documentation prepared by team TimeKeepers including System Requirements Specification, Architectural Design Specification, Detail Design Specification, and System Testing Plan will be made available to public. All the source code will also be available for future senior design teams.

7.5.2 Source: TimeKeepers

7.5.3 Constraints: None

7.5.4 Standards: None

7.5.5 Priority: 3-Moderate
7.6 PHP Version Support

7.6.1 Description: The UTA servers are running PHP version 5.1. Therefore, the web application shall be compatible with PHP version 5.1.

7.6.2 Source: TimeKeepers

7.6.3 Constraints: Latest PHP functions and Object Oriented Principles cannot be used.

7.6.4 Standards: None

7.6.5 Priority: 1-Critical
8. Other Requirements

This section covers any extra requirements that are not previously stated. This includes Web Browser Compatibility, Web Service Code Compatibility, Tablet Support and Responsive Design.

8.1 Web Browser Compatibility

8.1.1 Description: The web interface shall be accessible via various popular browsers such as Safari, Google Chrome, Mozilla Firefox, and Internet Explorer.

8.1.2 Source: TimeKeepers

8.1.3 Constraints: Different browsers may render the website differently.

8.1.4 Standards: None

8.1.5 Priority: 3-Moderate

8.2 Web Service Code Compatibility

8.2.1 Description: All the source code of the web functionality shall be compatible and portable with various platforms such as windows, Mac, and Linux.

8.2.2 Source: TimeKeepers

8.2.3 Constraints: None

8.2.4 Standards: None

8.2.5 Priority: 3-Moderate
8.3 Tablet Support

8.3.1 Description: The Android app will be available on Android tablets, supporting Android version 4.1.2 or higher.

8.3.2 Source: TimeKeepers

8.3.3 Constraints: Tablet market features and hardware are not standardized and may not offer the same user experience.

8.3.4 Standards: None

8.3.5 Priority: 5-Future

8.4 Responsive Design

8.4.1 Description: The website shall reflow its layout to fit in for the screen resolution or the window size.

8.4.2 Source: TimeKeepers

8.4.3 Constraints: Mobile browsers do not have the same resolution or the screen real-estate as the desktop browsers and are limited in functionality.

8.4.4 Standards: None

8.4.5 Priority: 5-Future
9. Acceptance Criteria

This section contains features of the Volunteer Tracking System that are required in order for the sponsor to accept our product. The features will be verified by testing and demonstrating them to the sponsor and the Maverick Volunteers.

9.1 Verify that the system is acceptably intuitive

9.1.1 Requirement(s) addressed: Requirement 3.20 Ease of Use – The Volunteer Tracking System shall be user friendly with readable styles and fonts.

9.1.2 Verification Procedure: The system will be thoroughly inspected by the current members of the Maverick Volunteers. A short tutorial and walk-through will also be provided to the volunteers that will cover all of the required features, such as logging in, adding opportunities, signing up for opportunities, inputting hours for an opportunity, and tracking progress.

9.2 Verify that the system successfully allows the users to login

9.2.1 Requirement(s) addressed: Requirement 3.15 Login – The Volunteer Tracking System shall allow users to login.

9.2.2 Verification Procedure: When testing the system, test usernames and passwords will be used, by creating test accounts, to verify that users will be able to successfully login to the system.

9.3 Verify that the facilitators are able to add opportunities

9.3.1 Requirement(s) addressed: Requirement 3.4 Add Volunteer Opportunities – The Volunteer Tracking System shall allow facilitator to input the new or upcoming volunteer opportunities.

9.3.2 Verification Procedure: During the testing phase, test opportunities will be created and attempt to be added into the system.
9.4 Verify that volunteers are able to sign up for a volunteer opportunity

9.4.1 Requirement(s) addressed: Requirement 3.6 Sign Up – The Volunteer Tracking System shall also allow volunteers to sign up for an opportunity.

9.4.2 Verification Procedure: During testing, test accounts and test opportunities will be created to verify if the users of those test accounts, which will be members of our team, can sign up for a test opportunity.

9.5 Verify that volunteers are able to input hours volunteered for an opportunity

9.5.1 Requirement(s) addressed: Requirement 3.1 Input Volunteer Hours - The Volunteer Tracking System shall allow volunteers to input their hours volunteered.

9.5.2 Verification Procedure: As stated before, during the testing phase, test accounts will be created along with test opportunities. We will then use those accounts to try to input hours for the created test opportunities.

9.6 Verify that volunteers are able to track number of hours volunteered

9.6.1 Requirement(s) addressed: Requirement 3.8 Track Progress – The Volunteer Tracking System shall allow users to track progress of their volunteer activities and the status of different service levels.

9.6.2 Verification Procedure: The test accounts created will have multiple test opportunities added and hours volunteered for those opportunities in order to verify that hours are being tracked.
10. Use Cases

This section explains how users will interact with the Volunteer Tracking System. Use cases are described and a use case diagram is depicted. Each use case consists of a scenario which clarifies how the case will be initiated, the actors involved, the action the use case begins with (TUCBW – The Use Case Begins With), and the action the use case ends with (TUCEW – The Use Case Ends With). Note that the word “page” is used instead of “page/screen” for readability, but “page” is interchangeable with “screen”.

10.1 Login to System

10.1.1 Scenario: The user either opens the mobile application or goes to the system website, which is where the web application will be located. She/he then enters her/his username and password into the appropriate fields. When successfully logged in, the user is directed to her/his “Home” page.

10.1.2 Actor(s): Volunteer

10.1.3 TUCBW: User entering the mobile application or going to the webpage

10.1.4 TUCEW: The system displays the user’s “Home” page.

10.2 View Volunteer Opportunities

10.2.1 Scenario: The user logs into the system and will be directed to her/his “Home” page where there will be a list of volunteering opportunities. The user can view the full list of opportunities by clicking on the “Opportunities” button which will direct her/him to the “Opportunities” page.

10.2.2 Actor(s): Volunteer

10.2.3 TUCBW: User successfully logging into the system or clicking on the “Opportunities” button in the menu.

10.2.4 TUCEW: The system finishes loading and displaying all of the opportunities.
10.3 Choose a Volunteer Opportunity

10.3.1 Scenario: The user clicks on an opportunity on the “Opportunities” page and is directed to that particular opportunity’s page. There the user will then be able to sign up for the opportunity. The opportunity will then be added to the user’s “Upcoming” tab in the user’s “Member Profile” page. The facilitator will now have the ability to input hours for this user (see Case 10.8 Input Hours for a Volunteer).

10.3.2 Actor(s): Volunteer

10.3.3 TUCBW: The user clicks on an opportunity in the “Opportunities” page.

10.3.4 TUCEW: The “Opportunities” page is loaded. If the user chooses to volunteer for the opportunity that was clicked on then the opportunity is added to the “Upcoming” tab in the user’s “Member Profile” page.

10.4 Input Hours

10.4.1 Scenario: In the “Home” page, the user clicks on an opportunity she/he has signed up for. The user then is able to input her/his hours. When the user is finished inputting her/his hours, a notification will be sent to the facilitator of that particular opportunity. The user is then taken back to the “Home” page.

10.4.2 Actor(s): Volunteer

10.4.3 TUCBW: The user clicks on opportunity she/he has signed up for on the “Home” page.

10.4.4 TUCEW: The Notification is sent to the facilitator and the user is directed to the “Home” page.

10.5 View Total Time Volunteered

10.5.1 Scenario: From the “Member Profile” page, which can be accessed from the “Home” page (“Profile” button), the user clicks on the “Volunteer Progress” tab. Here, the user will be able to see all of the opportunities she/he has volunteered for and the number of hours volunteered for each opportunity.

10.5.2 Actor(s): Volunteer

10.5.3 TUCBW: The user clicks on the “Volunteer Progress” tab in the “Member Profile” page.

10.5.4 TUCEW: The content in the “Volunteer Progress” tab finish loading.
10.6 View Notifications

10.6.1 Scenario: The user will click the “Notifications” button in the menu. This will direct her/him to the “Notifications” page. Here, the user will be able to see all of her/his notifications.

10.6.2 Actor(s): Volunteer

10.6.3 TUCBW: The user clicks on the “Notification” button in the menu.

10.6.4 TUCEW: The “Notification” page will finish loading.

10.7 View Reports

10.7.1 Scenario: By clicking on the “Reports” button on the “Home” page, the user will be directed to the “Reports” page. The user will be able to view the reports for each opportunity on this page.

10.7.2 Actor(s): Volunteer

10.7.3 TUCBW: The user clicks on the “Reports” button on the “Home” page.

10.7.4 TUCEW: The “Reports” page will finish loading.

10.8 Logout of System

10.8.1 Scenario: The user clicks on the “Logout” button from the drop down menu which can be viewed by clicking the “Profile” button in the “Home” page. The user is then logged out of the system. If the user is using the mobile application, the application will close. If the user is using the web application, the user will be directed to the Maverick Volunteers webpage.

10.8.2 Actor(s): Volunteer

10.8.3 TUCBW: The user clicks on the “Logout” button in the dropdown menu.

10.8.4 TUCEW: The application closes or the user is directed to the Maverick Volunteers webpage.

10.9 Input Hours for Volunteer

10.9.1 Scenario: The facilitator will click on the “Opportunities of your Category” button on the “Home” page. This will direct her/him to the “Opportunities of your Category” page where she/he can view the opportunities that she/he is the facilitator for. Clicking on an opportunity in this page will direct the facilitator to a page where she/he can view the names of the volunteers who are attending that opportunity. The facilitator also has the ability to view and change/input
the hours of a volunteer. After inputting the hours for a volunteer, the facilitator is taken back to the “Opportunities of your Category” page.

10.9.2 Actor(s): Facilitator

10.9.3 TUCBW: The facilitator will click on the “Opportunities of your Category” button in the “Home” page.

10.9.4 TUCEW: The facilitator is taken back to the “Opportunities of your Category” page.

10.10 Post Opportunity Reports

10.10.1 Scenario: By clicking on the “Reports” button on the “Home” page, the user will be directed to the “Reports” page. The “Generate Reports” tab will allow facilitators to generate reports for opportunities in their assigned categories. Once a report is generated, it can be viewed in the “View Reports” tab by all users.

10.10.2 Actor(s): Facilitator

10.10.3 TUCBW: The facilitator will click on the “Reports” button on the “Home” page.

10.10.4 TUCEW: The “View Reports” tab will be updated.

10.11 Add and Delete a Volunteer Opportunity

10.11.1 Scenario: The facilitator will click on the “Opportunities” button on the “Home” page. The facilitator is then directed to a page where she/he can add or delete an opportunity. Once the addition(s) and/or deletion(s) are complete, the “Opportunities” and “Opportunities of your Category” pages will all be updated.

10.11.2 Actor(s): Facilitator

10.11.3 TUCBW: The facilitator will click on the “Opportunities” button on the “Home” page.

10.11.4 TUCEW: The “Opportunities” and “Opportunities of your Category” pages are updated.
10.12 Generate a Letter of Validation

**10.12.1 Scenario:** The facilitator will click on the button “Generate a Letter of Validation” on the “Home” page. The facilitator will be directed to a page that will allow her/him to input a volunteer’s name, and any comments into a text box and a letter will be generated in which the volunteer’s name will be displayed along with the number of hours and the name of the opportunity she/he has volunteered for. The facilitator comments will also appear in this letter. The facilitator will also be able to choose who to send this letter to by email.

**10.12.2 Actor(s):** Facilitator

**10.12.3 TUCBW:** The facilitator will click on the “Generate a Letter of Validation” button on the “Home” page.

**10.12.4 TUCEW:** The letter of validation is generated.

10.13 Add and Delete Facilitators/Categories

**10.13.1 Scenario:** The system administrator will click on the “Member” button from the “Home” page. The administrator will be taken to a page that displays every member’s name and the categories of the members that are facilitators. Once the administrator adds and/or deletes a member or facilitator and/or category the system will be updated (every page will be updated) to account for the changes.

**10.13.2 Actor(s):** Administrator

**10.13.3 TUCBW:** The system administrator clicks on the “Member” button from the “Home” page.

**10.13.4 TUCEW:** The System is updated.

Figure 10-2 Use Case Diagram for Facilitator
Figure 10-3 Use Case Diagram for Administrator
11. Feasibility Assessment

The following sections will analyze the feasibility of the Volunteer Tracking System which includes both the website and the Android application. The topics that will be covered include: Scope Analysis, Research, Technical Analysis, Cost Analysis, Resource Analysis and Schedule Analysis. All the analysis has been done based on Team member’s prior experience and sponsor feedback.

11.1 Scope Analysis

After carefully reviewing the critical requirements, we have considered this project to be of moderate difficulty. Since the project primarily deals with web and mobile development, and since most of our team members have a good experience in both fields from previous group projects, it is highly probable that we will be able to complete the project within the allowed time frame. We looked at other senior design projects of similar nature to ours which were completed in the prior semester and found that the projects were completed on time without any major issues or conflicts. The core functionality of our system is to allow a user to record his/her volunteered time as well as keep track of progress, so most of our effort in the system development will be focused towards making this process as effective as possible. Since our system won’t have a huge number of users, we expect our system database to be of moderate complexity. Therefore, based on the assumption that we will not be completing the future requirements, we consider this project to be highly feasible.

11.2 Research

So far our team has researched the feasibility of various web programming languages such as PHP, JSP, ASP and JavaScript to determine the best combination of languages for our project. We also looked at some open source projects of similar nature so that we can come up with a reasonable ballpark for schedule analysis. We are also currently researching on various IDE tools that are available for web as well as mobile development. Some of our team members are not that much experienced with Android programming so we are also researching about good tutorials and books. Also according to our current plan we hope to have our website as a subpage inside college of engineering webpage so we are looking into how the UTA server is operated and what are the different files we need to provide. As we get clearer on the requirements and go into the design phase, we will be performing more research as needed.
11.3 Technical Analysis

The project will primarily be a software-oriented project. The system will have both a web and a mobile implementation. The mobile implementation will most likely be an Android app. For web development part of the project, the skills required are experience with HTML, CSS, PHP and JavaScript. For mobile development part, skills required are experience in Android Development Kit. Our team will also be using MySQL and SQLite for the system database. Our team already possesses most of the technical skills required. Some of the members need to be more familiar with JavaScript, PHP and Android development. We hope to achieve that through impromptu training sessions by experienced team members. We also plan on using NetBeans and Android Studio for development purposes. In order to control and manage our source code we will be using GIT.

11.4 Cost Analysis

The budget that we have been given for this project is $800. With our initial research we have estimated that we will be able to complete the project well within the budget. Our only main expense is google play publishing services. Other items such as Android development environments, Git source control software, Dropbox file sharing are free services. Also we will be hosting our website under UTA server so we won’t have any hosting charges. The table below explains the different items and their respective costs.

<table>
<thead>
<tr>
<th>Item</th>
<th>Cost</th>
</tr>
</thead>
<tbody>
<tr>
<td>Android Studio, NetBeans</td>
<td>$0</td>
</tr>
<tr>
<td>Git (Student Edition)</td>
<td>$0</td>
</tr>
<tr>
<td>MySQL</td>
<td>$0</td>
</tr>
<tr>
<td>Google Play Publishing</td>
<td>$25</td>
</tr>
<tr>
<td>Total</td>
<td>$25.00</td>
</tr>
</tbody>
</table>

Table: 11-1 Cost Summary
11.5 Resource Analysis

Our team consists of five members. Three of our members are computer science students, one member is a Computer Engineering student and one member is a Software Engineering student. One of our team members has worked at the Earth and Environmental Sciences Department in the past as the web developer for the department. Some of our team members have also worked on research and internships projects. So our team has a good mix of experience and knowledge. Most of us are also familiar with object oriented software engineering principles, which are very useful in designing websites and mobile apps. All of us have experience of using IDEs such as NetBeans and Eclipse.

Currently the main challenge for our team is the lack of Android development experience. Most of us have not developed a mobile application of significant size so we will have to work on our Android programming skills. We plan to achieve that through tutorials and group training sessions.
11.6 Schedule Analysis

Method 1: COCOMO

We analyzed the different modules of our software and estimated the lines of code for each component based on research of similar previous projects and our own development experience.

<table>
<thead>
<tr>
<th>Source Code Component (Android App)</th>
<th>Estimated Lines of Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Main Activity Class (GUI and data retrieval)</td>
<td>500</td>
</tr>
<tr>
<td>Android Manifest File</td>
<td>100</td>
</tr>
<tr>
<td>Resources File (Strings, Icon, Images)</td>
<td>100</td>
</tr>
<tr>
<td>Volunteer Activity</td>
<td>150</td>
</tr>
<tr>
<td>Admin Activity</td>
<td>150</td>
</tr>
<tr>
<td>Facilitator Activity</td>
<td>150</td>
</tr>
<tr>
<td>Data Model Activity (Core Data Structure Definitions)</td>
<td>150</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>1300</strong></td>
</tr>
</tbody>
</table>

Table: 11-2 Estimated Lines of Code for App
<table>
<thead>
<tr>
<th>Source Code Component (Website)</th>
<th>Estimated Lines of Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>GUI</td>
<td>500</td>
</tr>
<tr>
<td>Database Files</td>
<td>200</td>
</tr>
<tr>
<td>Volunteer controller files</td>
<td>250</td>
</tr>
<tr>
<td>Admin controller files</td>
<td>250</td>
</tr>
<tr>
<td>Facilitator controller files</td>
<td>250</td>
</tr>
<tr>
<td>Internal log files</td>
<td>100</td>
</tr>
<tr>
<td>Other files (JavaScript, CSS, JQuery, Ajax)</td>
<td>150</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>1700</strong></td>
</tr>
</tbody>
</table>

Table: 11-3 Estimated Lines of Code for Web

**COCOMO Estimation:**

Total estimated source lines of code: 3000

KLOC: 3.000

Effort = aKLOC\(^b\)

Duration = c (Effort)\(^d\)

Resources Required = Effort/ Duration

E = total effort in man-months
<table>
<thead>
<tr>
<th>Project Category</th>
<th>a</th>
<th>b</th>
<th>c</th>
<th>d</th>
</tr>
</thead>
<tbody>
<tr>
<td>Organic</td>
<td>2.4</td>
<td>1.05</td>
<td>2.5</td>
<td>0.38</td>
</tr>
<tr>
<td>Semi-Detached</td>
<td>3.0</td>
<td>1.12</td>
<td>2.5</td>
<td>0.35</td>
</tr>
<tr>
<td>Embedded</td>
<td>2.6</td>
<td>1.20</td>
<td>2.5</td>
<td>0.32</td>
</tr>
</tbody>
</table>

Table: 11-4 Capability Categories

Based on our team’s current capabilities and the project assignment we have identified our Project Category as Organic. Using the formulas we calculated the Effort, Duration and Resources required which are summarized below.

<table>
<thead>
<tr>
<th>Metric</th>
<th>Estimate</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Effort</td>
<td>7.6</td>
<td>Man-months</td>
</tr>
<tr>
<td>Duration</td>
<td>5.4</td>
<td>Calendar-months</td>
</tr>
<tr>
<td>Resources Required</td>
<td>1.4</td>
<td>People</td>
</tr>
</tbody>
</table>

Table: 11-5 Effort and Duration

From the table we can see the total duration required is 5.4 months and total resources required are 1.4 people. Since we have more resources than needed and considering the fact that the estimate for LOC is more than what it would be for project of this size we firmly believe that we can complete this project within allotted timeframe.
Method 2: Jone’s First Order Estimation

We analyzed five different function points for our analysis. The function points used are Number of inputs, Number of outputs, Inquiries, Logical Internal Files, External Interface Files. The table below shows the unadjusted function points.

<table>
<thead>
<tr>
<th>Program Characteristics</th>
<th>Low Complexity</th>
<th>Medium Complexity</th>
<th>High Complexity</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of inputs</td>
<td>6 x 3</td>
<td>2 x 4</td>
<td>0 x 6</td>
<td>26</td>
</tr>
<tr>
<td>Number of outputs</td>
<td>5 x 3</td>
<td>2 x 4</td>
<td>0 x 6</td>
<td>23</td>
</tr>
<tr>
<td>Inquiries</td>
<td>4 x 3</td>
<td>0 x 4</td>
<td>0 x 6</td>
<td>12</td>
</tr>
<tr>
<td>Logical Internal Files</td>
<td>2 x 3</td>
<td>2 x 4</td>
<td>1 x 6</td>
<td>20</td>
</tr>
<tr>
<td>External Interface Files</td>
<td>0 x 3</td>
<td>1 x 4</td>
<td>0 x 6</td>
<td>4</td>
</tr>
</tbody>
</table>

Table: 11-6 Function Point Analysis

Based on our calculations above our total unadjusted function points came out to be 85.

Next we calculated the adjustment factor based on the factors in the table below. For each factor we assigned a value in between 0 to 5. 0 meaning least influence and 5 meaning highest influence.
<table>
<thead>
<tr>
<th>Adjustment Factor</th>
<th>Degree of Influence (0-5)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Communication</td>
<td>1</td>
</tr>
<tr>
<td>Distributed Data Processing</td>
<td>1</td>
</tr>
<tr>
<td>Performance</td>
<td>2</td>
</tr>
<tr>
<td>Heavily used configurations</td>
<td>2</td>
</tr>
<tr>
<td>Transaction Rate</td>
<td>2</td>
</tr>
<tr>
<td>On-Line data entry</td>
<td>3</td>
</tr>
<tr>
<td>End use efficiency</td>
<td>3</td>
</tr>
<tr>
<td>On-Line update</td>
<td>3</td>
</tr>
<tr>
<td>Complex Processing</td>
<td>2</td>
</tr>
<tr>
<td>Reusability</td>
<td>3</td>
</tr>
<tr>
<td>Installation ease</td>
<td>3</td>
</tr>
<tr>
<td>Operational ease</td>
<td>2</td>
</tr>
<tr>
<td>Multiple sites</td>
<td>2</td>
</tr>
<tr>
<td>Facilitate change</td>
<td>3</td>
</tr>
<tr>
<td><strong>Total</strong></td>
<td><strong>32</strong></td>
</tr>
</tbody>
</table>

Table: 11-7 Adjustments Factors
Using the sum of all the influence we calculated the influence multiplier.

Influence Multiplier = (32 * .01) + .65 = .9

Adjusted Function Point Total = .97 * 85 = 82.45

<table>
<thead>
<tr>
<th>Unadjusted function point</th>
<th>85</th>
</tr>
</thead>
<tbody>
<tr>
<td>Influence Multiplier</td>
<td>0.97</td>
</tr>
<tr>
<td>Adjusted Function point</td>
<td>82.45</td>
</tr>
</tbody>
</table>

Table: 11-8 Function Point Summary

Duration = 82.45^{0.45} = 7.28 months

<table>
<thead>
<tr>
<th>Kind of software</th>
<th>Project Classification</th>
<th>Duration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Shrink-Wrap</td>
<td>Worst in class</td>
<td>7.28 months</td>
</tr>
</tbody>
</table>

Table: 11-9 Jone’s First Order Duration Summary

We have chosen the type of our software as Shrink-Wrap and worst in class because our project is of relatively small size and our development team doesn’t consist of experienced developers, especially in mobile development.
Hence we have come up with a total duration of 7.28 months which is a little higher than our COCOMO estimation but we need to keep in mind that we have chosen our software as the worst in class which may not necessarily be true. Below table gives a summary of all the duration for worst, average and best.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Best in class</td>
<td>5.58</td>
</tr>

Table: 11-10 Jone’s First Order Duration Comparison

So from both of our estimates COCOMO and Jone’s first order estimation we are looking at 5-7 months to complete the project.
12. Future Items

This section below lists requirements that will be implemented in future as time and schedule allow.

12.1 Customer Requirement 3.19: Volunteer Stories

12.1.1 Requirement Description: The Volunteer Tracking System shall provide a social aspect to the interface where the volunteer can input and share their stories.

12.1.2 Constraint: We have significant amount of core requirements of higher priority to implement and our schedule currently doesn’t allow for this requirement to be implemented in time.

12.2 Customer Requirement 3.18: Generate Newsletter

12.2.1 Requirement Description: The Volunteer Tracking System shall generate a newsletter upon the addition of new volunteer opportunities.

12.2.2 Constraint: User must be connected to the Internet to access the web-based system and have a valid email account.

12.3 Other Requirement 8.3: Tablet Support

12.3.1 Requirement Description: The system will be available on Android tablets, supporting Android version 4.1.2 or higher.

12.3.2 Constraint: Tablet market features and hardware are not standardized and may not offer the same user experience.

12.4 Other Requirement 8.4: Responsive Design

12.4.1 Requirement Description: The website shall reflow its layout to fit in for the screen resolution or the window size.

12.4.2 Constraint: We will have to specify design layouts for the mobile devices and we currently don’t have enough time resources to allocate for it.
