

CSE4352/5352 IoT and Networking
CSE6351 Advanced Topics in Computer Engineering
Spring 2023

(subject to change prior to the first day of class, revised 1/16)

Instructor Information

Instructor:

Jason Losh, Ph.D.

Office Number:

ERB 649

Office Telephone Number:

+1 817-272-3785 (CSE Department)

Email Address:

jlosh@uta.edu

Faculty Profile:

<https://mentis.uta.edu/explore/profile/jason-losh>

Office Hours:

Office hours will be TTh 9:30-10:30am or by appointment for maximum flexibility.

Teaching Assistants:

Due to the requirement to post information related to the costs of a course at least 30 days before the beginning of classes, no TA information is available. The TA information will be given out during the first day of class and is not part of the syllabus.

Course Information

Section Information:

001

Time and Place of Class Meetings:

Lecture: TTh 2:00-3:20pm, ERB 129 (and ERB 125 for some lab days)

Laboratory: ERB 125 can be used for soldering, construction, and testing of your projects.

This is a 100% face-to-face course. This is not an online course.

Description of Course Content:

Study of protocol stacks and layers, implementation of an Ethernet protocol stack, and design of a basic low-latency, small footprint IoT protocol on bare metal embedded devices and embedded Linux systems.

Prerequisite: C or better in both CSE 3320 and CSE 3442.

Student Learning Outcomes:

Upon successful completion of this course, students will have knowledge of:

- Overview of OSI layers and TCP/IP layers
- Understanding basic Ethernet media, network hardware, and physical layer
- Detailed knowledge of network interface (data link) layer, MAC/LLC, and low-level protocols (ARP/RARP/loopback)
- Detailed knowledge of Internet (network) layer protocols (e.g., IP, ICMP)
- Detailed knowledge of transport layer protocols (e.g., UDP, TCP)

- Some knowledge of session layer protocols (e.g., NetBIOS)
- Detailed knowledge of some application layer protocols (e.g., DHCP, DNS, Telnet, HTTP, MQTT)
- Writing an Ethernet protocol stack including support for ICMP/port unreachable, ICMP/ping, ARP, DHCP, and basic name services
- Writing TCP FSM and socket management code for HTTP and Telnet use
- Writing remote shell interface
- Creation of simple bridges from Ethernet to IoT networks
- Bridge code development as a simple gateway with port forwarding
- Creation and operation of simple IoT protocols allowing power-efficient device operation
- SSL/TLS 1.3 as time permits
- CSE6351 students will be assigned additional work

Class Web Page:

Additional files will be provided as needed on the course web site at <http://ranger.uta.edu/~jlosh/>.

Communication:

All class-wide communication by the instructor, including distribution of homework sets, will occur via the class listserv. If you are enrolled prior to the first day of class, you will be added to the listserv automatically. If you add on or after the first day of class, please sign up for the CSE4352-L listserv by sending an e-mail from your UTA e-mail account to listserv@listserv.uta.edu from your UTA e-mail account (no subject line needed) and the command SUBSCRIBE CSE4352-L as the message body. You will then receive an e-mail from the listserv server to which you must acknowledge to join the listserv with "OK" in an e-mail.

Canvas will only be used for Echo360 access.

Textbooks and Other Course Materials:

The following book is recommended, but not required:

Computer Networking: A Top-Down Approach, 7th Edition, Kurose & Ross, Pearson.

Extensive references, datasheets, application notes, and class notes will be provided on the course web site.

All students are required to have a TM4C123GXL evaluation kit. Information on this board is available at <http://www.ti.com/tool/EK-TM4C123GXL>. You can order from TI directly, mouser.com, or other parts distributors. The cost is around \$20-25.

Major Assignments and Examinations:

Hardware Due Date: Thursday, February 2

Project 1: Tuesday, March 21

Test: Thursday, April 20

Project 2: Monday, May 1

All tests and labs are on campus.

Technology Requirements:

The computer and OS must be capable of running appropriate compiler tools for programming the microcontroller. Ubuntu is used in the labs and lectures. Current computer recommendations are available at <https://www.uta.edu/academics/schools-colleges/engineering/students/student-computer>.

Grading Information

Grading:

- Grade scale: A (90-100), B (80-89), C (70-79), D (60-69), and F (0-59)
- Grade calculation:

- If TA support is sufficient:
Test (30%), Project 1 (35%), Project 2 (35%)
- If TA support is not sufficient:
Project 1 (50%), Project 2 (50%)
- Additional work is assigned for CSE 6351 as part of the project grade.
- The instructor reserves the right to make reasonable changes in performance evaluation as needed.
- Any request for re-grading must be submitted to the teaching assistant within one week of the completion of grading.

Expectations for Out-of-Class Study:

As a general rule of thumb, for every credit hour earned, a student should spend 3 hours per week studying outside of class. Hence, for this 3-credit course, a minimum expectation of 9 hours of study is expected in addition to the time spent in lecture.

Tests:

- If TA support is not sufficient, there will be no test in the course.
- To ensure that all students are treated equally and given the same time to prepare for the exam, no makeup will be provided for any test missed.
- If you know you are going to miss a test, you can request an advance test given 1 week prior to the normally scheduled time for the exam, with the understanding that any curve applied to the test taken at the official test time will not apply to the advance test, since the content of that test will be unique.
- Tests are on-campus
- Tests are open-book, open-notes, calculators allowed.

Project 1:

- Project 1 will consist of hardware construction and firmware development and it is expected that it will take approximately 50 hours to complete.
- Project 1 is an individual assignment. Discussing project topics is allowed, but the submissions must be unique. Sharing of code is not allowed.
- Interim deadlines for hardware construction and some software milestones will occur as part of the lab exercises.

Project 2:

- Project 2 will consist of hardware construction and firmware development and it is expected that it will take approximately 50 hours to complete.
- Project 2 teams will consist of 1 or more students, depending on the complexity. All members of the team must participate equally and be prepared to answer questions about any part of the project.
- Interim deadlines for hardware construction may also apply.

Course Schedule

- Review of ARM M4F Architectural Basics (3 hrs)
- Review of TM4C123GXL GPIO and UART (1.5 hrs)
- Review of M4F Interrupts (1.5 hrs)
- Networks and OSI layer overview (6 hrs)
- Ethernet controller and simple framework demo for simple networks services (3 hrs)
- Packet sniffing with Wireshark (1 hr)
- Adding software buffering and interrupt support (1.5 hrs)
- Adding DHCP client support (1.5 hrs)
- Adding support for name services (1.5 hrs)
- Adding extended ICMP services (1.5 hrs)
- TCP state machine and TCP support (1.5 hrs)

- Gateway/bridge design (3 hrs)
- MQTT publish/subscribe model, broker/client, and Mosquitto broker (3 hrs)
- Wireless protocols (slotted v unslotted, retransmission/contention, acknowledgements)
- MQTT gateway design (3 hrs), strategies for message buffering, handling multiple endpoints
- Project support lecture content (7 hrs)
- Test (1.5 hrs)

The instructor reserves the right to make changes in the schedule as needed as the class progresses.

The official dates for registration, census, and dropping are available at www.uta.edu/acadcal.

Academic Integrity

This information is copied from <http://www.uta.edu/conduct/academic-integrity/index.php>.

The University of Texas at Arlington strives to uphold and support standards of personal honesty and integrity for all students consistent with the goals of a community of scholars and students seeking knowledge and responsibility. Furthermore, it is the policy of the University to enforce these standards through fair and objective procedures governing instances of alleged dishonesty, cheating, and other academic/non-academic misconduct.

Scholastic dishonesty includes, but is not limited to, cheating, plagiarism, and collusion on an examination or an assignment being offered for credit. Each student is accountable for work submitted for credit, including group projects.

- Cheating
 - Copying another's test or assignment (added note: remember this includes homework!)
 - Communication with another during an exam or assignment (i.e. written, oral or otherwise)
 - Giving or seeking aid from another when not permitted by the instructor
 - Possessing or using unauthorized materials during the test
 - Buying, using, stealing, transporting, or soliciting a test, draft of a test, or answer key
- Plagiarism
 - Using someone else's work in your assignment without appropriate acknowledgement
 - Making slight variations in the language and then failing to give credit to the source
- Collusion
 - Without authorization, collaborating with another when preparing an assignment

Safety Rules for ERB 121-127 and 132 Labs:

Scope:

- All UTA safety rules and regulations must be followed.
- These rules are in addition to UTA lab safety rules.
- In the event that a rule contained below is in conflict with UTA lab safety rules, the UTA safety rules shall supersede.

General rules:

- Students can only be in the lab when a teaching assistant, faculty member, or staff member is present.
- Students should be professional at all times in the lab.
- Food and drinks are not allowed in the lab at any time.
- When leaving the lab, all work surfaces and floors should be clear of breadboards, cables, wires, and tools prior to leaving.
- When leaving the bench, turn off all lab equipment and unplug soldering irons.

- When leaving the bench, make sure that all cables, tools, and soldering equipment are properly stored in the correct location.
- Please ensure that the lab is kept in a neat and tidy manner.
- Please pick up any loose wires or parts on the bench and floor before leaving the lab. There is a push broom and dust pan in both rooms.
- Note any hazards observed in the lab to the teaching assistant, faculty, or staff member immediately.
- For test equipment incorporating multi-language menus, such as oscilloscopes, please return the language to English before leaving the bench.
- When returning parts that are not consumables, make certain that the parts are returned to the correct drawer. If you are not certain, please leave them with the teaching assistant, faculty member, or staff member.
- Students should store backpacks and similar items in a way that does not create a trip hazard to others.

Personal protective equipment (PPE):

- Safety glasses must be worn at all times when using the soldering irons or using cutting tools, such as diagonal cutters, in the lab.
- When using chemicals, proper eye protection, gloves, and respiratory equipment must be worn.

Soldering irons:

- Soldering must be performed in the labs only at the soldering benches.
- Soldering irons should be used with care, while wearing safety glasses, and only after receiving training.
- When soldering and removing parts, or reworking a board, please use special care to ensure that solder is not splattered.
- Soldering irons must be placed back in their soldering station holder when not soldering to reduce the chance of injury or fire.
- Please keep the soldering station sponges wet when cleaning the iron tip but ensure that water is not spilled on the floor creating a slip hazard.
- Use the soldering iron smoke absorber fan units when soldering. Use them so that the exhaust air flow upwards.
- Some solders can contain lead, so wash hands thoroughly after using the soldering irons. No eating or drinking is allowed in the lab, as previously stated.
- No self-contained butane soldering irons are permitted.

Hand tools:

- Hand tools must be used with care and only when safety glasses are being worn.
- Diagonal cutters in particular can create tension on the wires during the cutting process, ejecting the loose wire, so please use special care.

Small powered rotary tools:

- Short use of powered cutting tools such as “Dremel” or small drill/driver can only be used at the soldering tables using a backup board to prevent damage to the tables.
- You must wear safety glasses.
- You must remove jewelry, necklaces, and lanyards and tie back long hair.
- For extended machining tasks, please use the designated Makerspace areas that are designed to handle the additional safety requirements and dust inhalation hazards instead.

Electrical hazards:

- The labs for these classes use voltages of 30V or less, but care must always be shown in using electrical circuits, regardless of the voltage.
- Do not use voltages of more than 30V unless approved in writing by the instructor.
- Do not modify the wiring or attempt repair of any lab equipment.

- Most of the lab equipment operates from 120V AC, which is a lethal voltage. Never pull on a cord to unplug it as this can cause damage to the strain relief and insulation, potentially resulting in exposed conductors.
- Please notify the TA, faculty member, or staff member and stop using the equipment immediately if you see nicks or damage to a power cord or another hazardous condition.

Computers:

- Students should not install any software on the lab computers without approval of the teaching assistant, faculty member, or staff member.
- Students should not remove any of the cables on the computer and the monitor on the bench.
- For external connection, an HDMI cable is provided at each workstation for configuring Raspberry Pi and similar computer hardware. This cable should not be disconnected from the monitor.

Institution Information

UTA students are encouraged to review the below institutional policies and informational sections and reach out to the specific office with any questions. To view this institutional information, please visit the [Institutional Information](http://www.uta.edu/provost/administrative-forms/course-syllabus/index.php) page

(<http://www.uta.edu/provost/administrative-forms/course-syllabus/index.php>) which includes the following policies among others:

- Drop Policy
- Disability Accommodations
- Title IX Policy
- Academic Integrity
- Student Feedback Survey
- Final Exam Schedule

Additional Information

Face Covering Policy:

While face coverings are not mandatory, all students and instructional staff are welcome to wear face coverings while they are on campus or in the classroom.

Attendance:

At The University of Texas at Arlington, taking attendance is not required but attendance is a critical indicator of student success. Each faculty member is free to develop his or her own methods of evaluating students' academic performance, which includes establishing course-specific policies on attendance. However, while UT Arlington does not require instructors to take attendance in their courses, the U.S. Department of Education requires that the University have a mechanism in place to mark when Federal Student Aid recipients "begin attendance in a course." UT Arlington instructors will report when students begin attendance in a course as part of the final grading process. Specifically, when assigning a student a grade of F, faculty report must the last date a student attended their class based on evidence such as a test, participation in a class project or presentation, or an engagement online via Canvas. This date is reported to the Department of Education for federal financial aid recipients.

In this course, attendance in-class, on-campus is expected. Attending tests and laboratories in person is required.

Emergency Exit Procedures:

Should we experience an emergency event that requires evacuation of the building, students should exit the room and move toward the nearest exit. When exiting the building during an emergency, do not take an elevator but use the stairwells instead. Faculty members and instructional staff will assist students in selecting the safest route for evacuation and will make arrangements to assist individuals with disabilities.

Academic Success Center

The Academic Success Center (ASC) includes a variety of resources and services to help you maximize your learning and succeed as a student at the University of Texas at Arlington. ASC services include supplemental instruction, peer-led team learning, tutoring, mentoring and TRIO SSS. Academic Success Center services are provided at no additional cost to UTA students. For additional information visit: [Academic Success Center](#). To request disability accommodations for tutoring, please complete this [form](#).

Emergency Phone Numbers

In case of an on-campus emergency, call the UT Arlington Police Department at **817-272-3003** (non-campus phone), **2-3003** (campus phone). You may also dial 911. Non-emergency number 817-272-3381.
