CSE 3302/5307-001: Programming Languages

Fall 2015: TR 3:30 - 4:50, ERB 131

Instructor:	Bob Weems, Associate Professor
Office:	627 ERB (weems@uta.edu, http://ranger.uta.edu/~weems)
Hours:	T 11:15 a.m -1:15 p.m., R 1:00 - 3:00 p.m.

GTA: Contact information will be on my personal webpage

Prerequisites: CSE 1325: O-O Programming
CSE 2320: Algorithms & Data Structures
CSE 2312: Comp. Org. & Assembly Lang. Prog.

Objective: In future design situations, students will be capable of considering programming language issues.

Outcomes:
1. Understanding of programming language paradigms, including imperative, functional, and object-oriented/generic.
2. Understanding of the breadth of design issues in defining programming languages, along with those for building compilers, interpreters, and run-time systems.
3. Understanding, at an elementary level, of the formalisms and notations used with programming languages.

Textbooks: M. Gabbrielli and S. Martini, *Programming Languages: Principles and Paradigms*, Springer-Verlag, 2010.

D. Crockford, *JavaScript: The Good Parts*, Yahoo Press, 2008.
http://javascript.crockford.com

R. Kent Dybvig., *The Scheme Programming Language*, 4th ed., MIT Press, 2009. http://www.scheme.com/tspl4/

N. Wirth, *PASCAL-S: A Subset and its Implementation*.
http://ranger.uta.edu/~weems/NOTES3302/NEWNOTES/NOTES02/Wirth-PascalS.pdf

Readings: Indicated on calendar later in syllabus.

Grade: Based on the following weights:

Exams 1-3: 70% divided evenly among 3 exams.
Exam 3: Thursday, December 17, 2:00-4:30

Programs: 30% divided evenly among 4 - 6 assignments.

Policies:

1. Regular attendance is expected. You are expected to know lecture contents and announcements. The lectures are being recorded and will have a link on the web page, but no availability guarantee is made (e.g. this is not a "distance" course).

2. The course web page is `http://ranger.uta.edu/~weems/NOTES3302/cse3302.html`

3. You are expected to have read the assigned readings by the specified date.

4. CHEATING - YOU ARE EXPECTED TO KNOW UNIVERSITY POLICIES. If you are suspected of cheating, the matter must go through university channels outside of the CSE Department. `http://www.uta.edu/conduct/`

5. Any request for special consideration must be appropriately documented in advance. (Special consideration does not include giving a higher grade than has been earned.)

6. Late programs are penalized according to the following schedule. LABS ARE DUE AT 3:15 PM ON THE DUE DATE, NOT MIDNIGHT. After the due time, assistance will not be provided.

Degree of lateness	Penalty
Up to 3:15 next day	5 pts
Up to 3:15 two days	15 pts
Up to 3:15 three days	30 pts
Up to 3:15 four days	60 pts

7. Each lab is graded as follows:

   Some Issues

   a. Output/Code   70%   If you know your program has problems, you should let the GTA know what parts are functional. Test cases demonstrating the limited functionality are useful.

   b. Style   15%   The emphasized language features are applied appropriately.

   c. Structure   15%   Code is not unnecessarily complicated or long. It is often better to rewrite code rather than patching several times.

   You are responsible for correctly submitting each programming assignment on Blackboard.

   Points will not be awarded for programs that are not substantially complete.

8. If you require a reasonable accomodation for a disability, please contact me no later than the second week of this semester. Further details at `http://www.uta.edu/disability/`

9. Occasional class-wide email messages (e.g. weather situations, clarifications) may be sent to the addresses recorded by MyMav.

Course Content (in chronological order)

Reading Annotations:

		Gabbrielli-Martini	Crockford	Wirth	Dybvig
1	Preliminaries (Abstract Machines) Steele - *Growing a Language*, OOPSLA 98	Intro., 1, 13.3, 13.4, 13.5, 13.6			1
2	Four-and-a-Half New Friends		1, 10	1-3	2
3	Syntax & Semantics	2	2, 7, D	5, A	3.1-3.2
4	Names & Scope	4			
5	Memory Management	5		4	
6	Control Structure	6			
7	Control Abstraction	7			5.5, 5.7
8	Structuring Data	8	3-6		
9	Data Abstraction	9			
10	Object-Orientation, Polymorphism, and Generic Programming	10			
11	Functional Paradigm	11			3.3, 5.6
12	Logic Programming Brewka et.al. - *ASP at a Glance*, C. ACM 54 (12)	12
